FAQ about AI quickstarts

- Are AI quickstarts production-ready?
 - no
- Are AI quickstarts supported?
 - no
- Do AI quickstarts replace everything else (blogs/video/tutorials/docs)?
 - no
- Will Red Hat build my idea for an AI quickstart?
 - maybe

AI quickstart catalog (<https://red.ht/ai-quickstarts>)

AI quickstarts

Explore a variety of innovative AI use cases from our community. These simple, focused examples have been designed for fast and easy deployment on the Red Hat AI platform.

 This content is authored by Red Hat experts, but has not yet been tested on every supported configuration.

Filter by

- ☐ Banking and securities 3
- ☐ Healthcare 1
- ☐ Retail 2
- ☐ Adopt and scale AI 6

Centralize company knowledge with an Enterprise RAG Chatbot

Use retrieval-augmented generation (RAG) to enhance large language models with specialized data sources for more accurate and context-aware responses.

Adopt and scale AI

Build an AI-powered virtual agent

Build and deploy a conversational AI virtual agent on Red Hat OpenShift AI to automate customer interactions and provide instant support.

Adopt and scale AI

Accelerate Ansible troubleshooting with intelligent log analysis

Act on suggestions from an AI agent that identifies Ansible errors, routes them to the right experts, and offers guided remediation steps for faster resolution.

Adopt and scale AI

Accelerate Retail AI analytics with data governance controls

Enhance retail discovery with an AI assistant that activates governance for levels

Secure Model Inference with F5 Distributed Cloud API Security

Secure AI-powered financial services applications against injection attacks

Deploy a privacy-focused AI assistant

Build a healthcare AI assistant that ensures your large language model has multiple

README.md

Welcome to AI quickstart 🙌

tl;dr

AI quickstarts are:

- portable, AI-centric demos
- focused on real business use cases
- easily deployable in Red Hat AI environments

They illustrate what can be built on top of Red Hat AI.

People

Next Steps

- Please try out our AI quickstarts!
- Give us feedback!
- Come and help us build more!

... and now, Michael will present one of his quickstarts

IT self service quickstart

– Business use case ?

- General - Automate IT process to reduce cost
 - **Reduced employee time** to complete common requests.
 - **Higher compliance** to process standards.
 - **Fewer rejected requests** due to missing/incorrect information.
 - **Shorter time** to close a ticket.
- Specific - Automate laptop refresh process

Key Principles

- Meet users where they are
 - Slack
 - Email
- Integrate with Existing system
 - ServiceNow

What do you get ?

- Laptop refresh implementation
- Working deployment
- Extendable components for your use case(s) to build on

Top Level architecture

- Laptop policy RAG database
- ServiceNow MCP

Built and Deployed as Scalable OpenShift AI deployment

A conversation

Hello! I'm the routing agent, and I'm here to help you get connected with the right specialist agent to assist you with your query. My role is to quickly understand your needs and direct you to the most suitable expert who can provide you with the best possible support.

What brings you here today? Could you please describe what you need help with? We currently have specialist agents available to assist with laptop refresh requests and email address updates. Is either of these topics related to your query, or is there something else you need assistance with? I'm all ears and ready to help!

[Turn 1]  USER

I need help with laptop refresh

[Turn 2]  ASSISTANT

Here is your laptop information:
Employee Name: Isbella Mueller
Employee Location: EMEA
Laptop Model: ThinkPad T14
Laptop Serial Number: TP14006
Laptop Purchase Date: 2019-11-18
Laptop Age: 6 years and 1 month
Laptop Warranty Expiry Date: 2022-11-18
Laptop Warranty: Expired

Your laptop, a ThinkPad T14, was purchased on 2019-11-18 and is currently 6 years and 1 month old (73 total months). The company's laptop refresh policy states that standard laptops will be refreshed every 3 years from the date of issuance. Since your laptop is 6 years old (73 months), you are eligible for a laptop refresh. Would you like to proceed with reviewing the available laptop options for your location?

A conversation

[Turn 3]  USER

Yes, I'd like to proceed with reviewing the available laptop options for my location, please show me the list.

[Turn 4]  ASSISTANT

Here are the available laptop options for your location (EMEA):

1. Model: MacBook Air M2 - ServiceNow Code: apple_mac_book_air_m_2
 - Manufacturer: Apple
 - Target User: General Office
 - Cost: €1,299
 - Operating System: macOS
 - Display Size: 13.6 inches
 - Display Resolution: 2560 x 1664
 - Graphics Card: Apple M2 GPU
 - Minimum Storage: 256 GB SSD
 - Weight: 2.7 lbs
 - Ports: 2 x Thunderbolt/USB 4, MagSafe
 - Minimum Processor: Apple M2
 - Minimum Memory: 8 GB
 - Dimensions: 11.97 x 8.46 x 0.44 inches

+ other options

A conversation

[Turn 5]  USER

I'd like to select option 1, the MacBook Air M2 with ServiceNow Code: apple_mac_book_air_m_2, as it seems suitable for my general office needs.

[Turn 6]  ASSISTANT

You've selected the MacBook Air M2 with ServiceNow Code: apple_mac_book_air_m_2. Would you like to proceed with the creation of a ServiceNow ticket for a laptop refresh?

[Turn 7]  USER

Yes, please proceed with creating the ServiceNow ticket for the laptop refresh.

[Turn 8]  ASSISTANT

A ServiceNow ticket for a laptop refresh has been created for you. The ticket number is REQ3520696. Your request will be processed by the IT Hardware Team, and you will receive updates via email as the ticket progresses. Is there anything else I can help you with?

A conversation – Lets see it in action

The screenshot displays a Slack workspace named "Mytestsandbox555". The left sidebar shows the navigation menu with options like Home, DMs, Activity, Files, and More. The main panel shows a conversation with the "Self-Service Agent". The agent's message reads: "Hello! My name is Rachel, and I'm a routing agent here to help you get connected with the right specialist. I'm here to assist you with getting your inquiry directed to the correct team. To get started, could you please tell me a little bit about what you need help with today? We currently support laptop refresh requests and email address updates, but don't worry if your issue doesn't fall into one of those categories - I'm here to help you figure out the best next steps. Please go ahead and describe what you need help with, and I'll do my best to get you connected with the right specialist as quickly as possible!" Below the message are buttons for "View Session" and "Start New Session". The bottom of the screen shows the message input area with a text box and various formatting options.

A conversation - Lets see it in action

A conversation – Lets see it in action – backup

The image displays three sequential screenshots of a web-based chat application titled "Red Hat Sandbox". The interface includes a left sidebar with navigation options like Home, Threads, Huddles, Drafts & sent, Directories, Starred, Channels, Direct messages, and Apps. The main chat area shows a conversation with a user named "MICHAEL_AGENT".

Screenshot 1 (Left): The chat starts with a welcome message from "MICHAEL_AGENT" (Routing Agent Rachel) at 5:50 PM. The message reads: "Hello! Welcome to our support system. My name is Routing Agent Rachel, and I'll be happy to assist you in getting connected with the right specialist agent to address your needs. Could you please tell me what brings you here today? What do you need help with? We currently have specialist agents available to assist with laptop refresh requests and email address updates. If you're unsure, don't worry! Just describe the issue or request you have, and I'll do my best to point you in the right direction. What's on your mind, and how can we help you today?" Below the message are buttons for "View Session" and "Start New Session".

Screenshot 2 (Middle): The user "midawson" responds at 5:50 PM: "I would like to refresh my laptop". "MICHAEL_AGENT" responds at 5:51 PM with a detailed response: "Here is your laptop information: Employee Name: midawson, Employee ID: 18001, Employee Location: REMOTE, Laptop Model: MacBook Pro 16-inch, Laptop Serial Number: TEST9001, Laptop Purchase Date: 2023-07-07, Laptop Age: 2 years and 4 months, Laptop Warranty Expiry Date: 2026-07-06, Laptop Warranty: Active. Your laptop, a MacBook Pro 16-inch, was purchased on 2023-07-07 and is currently 2 years and 4 months old (28 total months). The company's laptop refresh policy states that standard laptops will be refreshed every 3 years from".

Screenshot 3 (Right): The user "midawson" responds at 5:51 PM: "yes". "MICHAEL_AGENT" responds at 5:51 PM: "A ServiceNow ticket for a laptop refresh has been created for you. The ticket number is REQ4333214. Your request will be processed by the IT Hardware Team, and you will receive updates via email as the ticket progresses. Is there anything else I can help you with?".

 - Email
 - others...
- Conversation threading (order and sequence)
- LangGraph state

Agent Service

- Built on Llama Stack
- Responses API with Langgraph
 - State in PostgreSQL database
 - yaml based configuration of agents
- Big and small prompt approach
- Shields integration

Agent Service – Big Prompt

...

Follow this process to help them:

1) Get the user's laptop information using the employee-info mcp server. CRITICAL use the `get_employee_laptop_info` tool to get the laptop information. CRITICAL If an employee-info mcp server is unavailable, don't proceed and notify the user that you weren't able to find relevant laptop info.

2) CRITICAL Query the laptop-refresh knowledge base to find the laptop refresh interval policy. CRITICAL You MUST use a knowledge base query tool to search for "laptop refresh interval" or "laptop refresh policy" to get the actual policy from the knowledge base. CRITICAL Do NOT guess or assume the refresh interval - you MUST retrieve it from the knowledge base. CRITICAL The refresh interval is typically stated as "X years" in the policy documents.

3) Check eligibility by converting both the laptop age and policy refresh interval to total months, then compare using greater-than-or-equal-to: $\text{laptop_age_months} = (\text{years} \times 12) + \text{months}$, $\text{policy_months} = (\text{policy_years} \times 12)$. The laptop is ELIGIBLE if $\text{laptop_age_months} \geq \text{policy_months}$, otherwise NOT ELIGIBLE. CRITICAL: You must do the mathematical comparison correctly. If the laptop age in months is even 1 month less than the policy requirement in months, it is NOT ELIGIBLE. CRITICAL EXAMPLES: If laptop is 45 months and policy is 46 months, then $45 < 46$ therefore NOT ELIGIBLE. If laptop is 44 months and policy is 46 months, then $44 < 46$ therefore NOT ELIGIBLE. If laptop is 46 months and policy is 46 months, then $46 \geq 46$ therefore ELIGIBLE. If laptop is 47 months and policy is 46 months, then $47 \geq 46$ therefore ELIGIBLE. CRITICAL: Even if a laptop is only 1 month short of the policy requirement, it is NOT ELIGIBLE. CRITICAL Use the EXACT refresh interval from the knowledge base. Generate a summary clearly stating the laptop age in months, policy requirement in months, and whether ELIGIBLE or NOT ELIGIBLE.

4) ...

Agent Service – Small Prompt

```
...
# State definitions
states:
# State 1: Lookup Employee Information
lookup_employee:
  type: "llm_processor"
  temperature: 0.3 # Factual lookup, should be consistent
  allowed_tools: [ "get_employee_laptop_info" ]
  prompt: |
    You are a helpful laptop refresh assistant.
```

CRITICAL: DO NOT announce what you are about to do (e.g., "I will look up your information", "Let me check the database"). Execute tool calls silently and present only the results to the user.

CRITICAL: Look up the laptop information for the authenticated user by using the `get_employee_laptop_info` tool.

CRITICAL: You MUST include ALL laptop information EXACTLY as returned by `get_employee_laptop_info`. Do NOT summarize, do NOT omit any fields, do NOT reformat. Copy the COMPLETE output including all fields: Employee Name, Employee Location, Laptop Model, Laptop Serial Number, Laptop Purchase Date, Laptop Age, Laptop Warranty Expiry Date, Laptop Warranty.

CRITICAL: If any values are missing in the tool output, keep them empty - do NOT invent values.

If the user is not found, explain that their information was not found in the database.

```
transitions:
  success: "classify_lookup_result"
data_storage:
  employee_info: "llm_response"
```

Leveraging the quickstart in practice

Red Hat AI Factory with NVIDIA

Accelerate Enterprise AI in production at scale on a unified foundation

* DGX Servers and BasePod reference architectures
**OpenShift and OpenShift Virtualization use restricted to Red Hat AI and/or NVIDIA AI Enterprise only

AI Quickstarts Today

Centralize company knowledge with an Enterprise RAG Chatbot

Use retrieval-augmented generation (RAG) to enhance large language models with specialized data sources for more accurate and context-aware responses.

Adopt and scale AI

Build an AI-powered virtual agent

Build and deploy a conversational AI virtual agent on Red Hat OpenShift AI to automate customer interactions and provide instant support.

Adopt and scale AI

Streamline AML Investigation Workflows with RAG and NVIDIA

Build anti-money laundering investigation workflows with RAG and NVIDIA models on Red Hat AI, with built-in inference, governance, observability, and more.

Banking and securities

Accelerate Ansible troubleshooting with intelligent log analysis

Act on suggestions from an AI agent that identifies Ansible errors, routes them to the right experts, and offers guided remediation steps for faster resolution.

Adopt and scale AI

Accelerate Retail AI analytics with data governance controls

Enhance retail discovery with an AI assistant that activates governance for loyalty analytics using secure, policy-aware natural language queries.

Retail

Secure Model Inference with F5 Distributed Cloud API Security

Secure AI-powered financial services applications against injection attacks, shadow APIs, and abuse while safeguarding sensitive financial data.

Banking and securities

AI Quickstarts Today

Deploy a privacy-focused AI assistant

Build a healthcare AI assistant that ensures your large language model has multiple layers of protection, including PII detection and content moderation.

Healthcare

Automate IT processes with Self-Service Agents - Laptop Refresh

Transform IT service delivery using AI to lower support effort, improve compliance, and increase throughput.

Adopt and scale AI

Serve a lightweight HR assistant

Replace hours spent searching policy documents with higher-value relational work.

Banking and securities

Transform product discovery with AI recommendations

Integrate AI-driven product recommendations, automated review summarization, and enhanced search capabilities into an e-commerce storefront.

Retail

Audit AI apps to meet compliance goals

Deploy a financial audit system with insights into the performance, cost, and usage of your large language models in real time.

Banking and securities

Accelerate enterprise software development with NVIDIA and MaaS

Optimize private app development using NVIDIA Nemotron models through Models-as-a-Service on your own multi-tenant infrastructure in Red Hat AI.

Adopt and scale AI

Summarize and analyze your observability data

Create an interactive dashboard to analyze AI model performance and OpenShift cluster metrics using Prometheus.

Adopt and scale AI

5%

- Start with a solid AI Platform
- Build upon that with Quickstarts, Validated Patterns, Blueprints
- Focus on the last 5% (or so) of the overall solution that is
TRULY DIFFERENTIATED

Let's Do This!

- Deploy the Quickstart to your own **OpenShift AI** Cluster
- Don't have OpenShift AI yet? Talk to your Red Hat sales rep and discuss a **workshop** or **demo**
